7.6. LABS

Exercise 7.3: Rolling Updates and Rollbacks

One of the advantages of micro-services is the ability to replace and upgrade a container while continuing to respond to client requests. We will use the OnDelete setting that upgrades a container when the predecessor is deleted, then the use the RollingUpdate feature as well, which begins a rolling update immediately.

nginx versions

The **nginx** software updates on a distinct timeline from Kubernetes. If the lab shows an older version please use the current default, and then a newer version. Versions can be seen with this command: sudo docker image Is nginx

1. Begin by viewing the current updateStrategy setting for the DaemonSet created in the previous section.

```
student@cp:~$ kubectl get ds ds-one -o yaml | grep -A 4 Strategy
 updateStrategy:
   rollingUpdate:
     maxSurge:; 0
     maxUnavailable: 1
    type: RollingUpdate
```

2. Edit the object to use the OnDelete update strategy. This would allow the manual termination of some of the pods, resulting in an updated image when they are recreated.

```
student@cp:~$ kubectl edit ds ds-one
 updateStrategy:
   rollingUpdate:
     maxUnavailable: 1
   type: OnDelete
                                 #<-- Edit to be this line
status:
```

3. Update the DaemonSet to use a newer version of the nginx server. This time use the set command instead of edit. Set the version to be 1.16.1-alpine.

```
student@cp:~$ kubectl set image ds ds-one nginx=nginx:1.16.1-alpine
daemonset.apps/ds-one image updated
```

4. Verify that the Image: parameter for the Pod checked in the previous section is unchanged.

```
student@cp:~$ kubectl describe po ds-one-b1dcv |grep Image:
                          nginx:1.15.1
    Image:
```

5. Delete the Pod. Wait until the replacement Pod is running and check the version.

```
student@cp:~$ kubectl delete po ds-one-b1dcv
pod "ds-one-b1dcv" deleted
```

```
student@cp:~$ kubectl get pod
```

```
NAME
                          READY
                                     STATUS
                                                RESTARTS
                                                            AGE
                                                            19s
  ds-one-xc86w
                          1/1
                                     Running
                                                0
2
                           1/1
                                                            4m8s
  ds-one-z31r4
                                     Running
                                                0
```

student@cp:~\$ kubectl describe pod ds-one-xc86w |grep Image:

```
Image: nginx:1.16.1-alpine
```

6. View the image running on the older Pod. It should still show version 1.15.1.

```
student@cp:~$ kubectl describe pod ds-one-z31r4 |grep Image:
```

```
Image: nginx:1.15.1
```

7. View the history of changes for the DaemonSet. You should see two revisions listed. As we did not use the --record option we didn't see why the object updated.

```
student@cp:~$ kubectl rollout history ds ds-one
```

```
daemonsets "ds-one"

REVISION CHANGE-CAUSE

1 <none>
2 <none>
```

8. View the settings for the various versions of the DaemonSet. The Image: line should be the only difference between the two outputs.

student@cp:~\$ kubectl rollout history ds ds-one --revision=1

```
daemonsets "ds-one" with revision #1
2
  Pod Template:
3
    Labels:
                     system=DaemonSetOne
4
     Containers:
5
      nginx:
6
       Image:
                     nginx:1.15.1
                     80/TCP
       Port:
       Environment:
                            <none>
       Mounts:
                       <none>
     Volumes:
                      <none>
10
```

student@cp:~\$ kubectl rollout history ds ds-one --revision=2

```
1 ....
2 Image: nginx:1.16.1-alpine
3 ....
```

9. Use kubectl rollout undo to change the DaemonSet back to an earlier version. As we are still using the OnDelete strategy there should be no change to the Pods.

```
student@cp:~$ kubectl rollout undo ds ds-one --to-revision=1
```

```
daemonset.apps/ds-one rolled back
```

```
student@cp:~$ kubectl describe pod ds-one-xc86w |grep Image:
```

```
Image: nginx:1.16.1-alpine
```

7.6. LABS 3

10. Delete the Pod, wait for the replacement to spawn then check the image version again.

```
student@cp:~$ kubectl delete pod ds-one-xc86w
```

```
pod "ds-one-xc86w" deleted
```

student@cp:~\$ kubectl get pod

1	NAME	READY	STATUS	RESTARTS	AGE
2	ds-one-qc72k	1/1	Running	0	10s
3	ds-one-xc86w	0/1	Terminating	0	12m
4	ds-one-z31r4	1/1	Running	0	28m

student@cp:~\$ kubectl describe po ds-one-qc72k |grep Image:

```
Image: nginx:1.15.1
```

11. View the details of the DaemonSet. The Image should be v1.15.1 in the output.

```
student@cp:~$ kubectl describe ds |grep Image:

Image: nginx:1.15.1
```

12. View the current configuration for the DaemonSet in YAML output. Look for the updateStrategy: the the type:

```
student@cp:~$ kubectl get ds ds-one -o yaml
```

13. Create a new DaemonSet, this time setting the update policy to RollingUpdate. Begin by generating a new config file.

```
student@cp:~$ kubectl get ds ds-one -o yaml > ds2.yaml
```

14. Edit the file. Change the name, around line 69 and the update strategy around line 100, back to the default RollingUpdate.

```
student@cp:~$ vim ds2.yaml
....
  name: ds-two
....
  type: RollingUpdate
```

15. Create the new DaemonSet and verify the **nginx** version in the new pods.

```
student@cp:~$ kubectl create -f ds2.yaml
daemonset.apps/ds-two created
```

```
student@cp:~$ kubectl get pod
```

```
NAME
                        READY
                                  STATUS
                                             RESTARTS
                                                        AGE
ds-one-qc72k
                        1/1
                                                        28m
                                  Running
                                             0
                        1/1
                                                        57m
                                             0
ds-one-z31r4
                                  Running
ds-two-10khc
                        1/1
                                  Running
                                             0
                                                        5m
ds-two-kzp9g
                        1/1
                                  Running
                                             0
                                                        5m
```

student@cp:~\$ kubectl describe po ds-two-10khc |grep Image:

```
Image: nginx:1.15.1
```

16. Edit the configuration file and set the image to a newer version such as 1.16.1-alpine. Include the --record option.

17. View the age of the DaemonSets. It should be around ten minutes old, depending on how fast you type.

student@cp:~\$ kubectl get ds ds-two

1 NAME	E DI	ESIRED	CURRENT	READY	UP-TO-DATE	AVAILABLE	NODE-SELECTOR	AGE
2 ds-t	two 2		2	2	2	2	<none></none>	10m

18. Now view the age of the Pods. Two should be much younger than the DaemonSet. They are also a few seconds apart due to the nature of the rolling update where one then the other pod was terminated and recreated.

student@cp:~\$ kubectl get pod

1	NAME	READY	STATUS	RESTARTS	AGE
2	ds-one-qc72k	1/1	Running	0	36m
3	ds-one-z31r4	1/1	Running	0	1h
4	ds-two-2p8vz	1/1	Running	0	34s
5	ds-two-81x7k	1/1	Running	0	32s

19. Verify the Pods are using the new version of the software.

```
student@cp:~$ kubectl describe po ds-two-8lx7k |grep Image:
```

```
Image: nginx:1.16.1-alpine
```

20. View the rollout status and the history of the DaemonSets.

```
student@cp:~$ kubectl rollout status ds ds-two

daemon set "ds-two" successfully rolled out
```

student@cp:~\$ kubectl rollout history ds ds-two

```
daemonsets "ds-two"

REVISION CHANGE-CAUSE

1 <none>
2 kubectl edit ds ds-two --record=true
```

21. View the changes in the update they should look the same as the previous history, but did not require the Pods to be deleted for the update to take place.

7.6. LABS 5

22. Clean up the system by removing the DaemonSets.

```
student@cp:~$ kubectl delete ds ds-one ds-two

daemonset.apps "ds-one" deleted
daemonset.apps "ds-two" deleted
```
